# SUSTAINABILITY

# REPORT

Sustainability is an approach that aims to use natural, economic and social resources in a balanced way without jeopardizing the possibilities of future generations to meet their own needs while meeting today's needs. This concept is based on an understanding that brings environmental protection, economic growth and social development together. We are aware and determined of our responsibilities in Sustainable Tourism and Development. We are trying to leave a better world for future generations. Our corporate vision, mission, values and policies guide us while fulfilling these responsibilities.

# ENVIRONMENTAL POLICY

## ▶ Conservation

Environmental protection is our responsibility to protect ecosystems by using the resources offered by nature in a sustainable way and to leave a healthy life for future generations. Today, increasing pollution, deforestation and climate change have further increased the importance of environmental protection.

## ▶ Resource Protection

Resource protection aims to reduce our impacts on the environment without wasting and using our natural assets in a sustainable way. Limited resources such as water, energy, minerals and forests are meticulously protected both to meet today's needs and to be passed on to future generations.

## ▶ Energy Efficiency

Energy efficiency means performing the same function by consuming less energy. This minimizes negative effects on the environment by reducing carbon emissions while ensuring the protection of natural resources. Energy efficiency is one of the cornerstones of sustainable development and is of great importance in terms of economic savings and environmental protection.

## ▶ Mitigating Climate Change

Climate change manifests itself with serious effects such as increasing temperatures around the world, extreme weather events and damage to ecosystems. It is the responsibility of all of us as individuals and societies to slow down this process and reduce its effects. Reducing carbon emissions, using renewable energy sources, protecting forests and improving energy efficiency are critical steps to combat climate change. In addition, recycling, green transportation methods and sustainable agricultural practices also make significant contributions.

# ENERGY AND WATER EFFICIENCY

## Energy Efficiency

Energy efficiency means performing the same service or production by using less energy. This both ensures the protection of natural resources and reduces the damage to the environment. In addition, energy saving offers a cost advantage at the individual and social level. We increase energy efficiency with simple measures such as insulated buildings, energy-saving devices, LED lighting and the use of renewable energy. Small changes create big effects, so energy efficiency is the foundation of a sustainable life.

## Water Efficiency

Water efficiency means using available resources in the most effective way by preventing waste of water. Clean water resources on earth are limited and protecting these resources is vital for both the continuity of ecosystems and future generations. We can improve water efficiency with simple precautions: we repair dripping taps, use low flow shower heads, re-evaluate by accumulating rainwater and avoid unnecessary water consumption.

# CHEMICAL MANAGEMENT

Chemical management ensures that chemicals are controlled in a way that does not harm the environment and human health in the process from production to disposal. This process includes steps such as safe storage, transportation, use and waste management.

Correct labeling of harmful chemicals, preference for alternative environmentally friendly substances and recycling practices help minimize chemical risks. In addition, we raise awareness by providing training to employees and individuals.

Proper chemical management is a critical step to ensure not only the protection of the environment, but also occupational safety and public health.

# CONSERVATION OF BIODIVERSITY

## Amber Hotel

We support and contribute to the protection of biodiversity through the proper management of the property. We pay special attention to natural protected areas and areas with high biodiversity value. We minimize any discomfort in natural ecosystems, rehabilitate the damage and make compensatory contributions to conservation management.

## Protection of Biodiversity

Biodiversity refers to the diversity of all living species on earth and is vital for the healthy functioning of ecosystems. This delicate balance between plants, animals and microorganisms is one of the cornerstones of human life. Steps such as protection of natural habitats, prevention of overfishing, sustainable agriculture and forest management play a critical role in the protection of biodiversity. In addition, as individuals, we contribute to this effort by using environmentally friendly products and exhibiting behaviors that do not harm local ecosystems.

# CARBON RELEASE

06

Encourage the use of reusable items in the workplace

Implementing the 'reduce and reuse' mentality

Discovering alternatives to disposable plastics

# SUPPORT OF LOCAL PEOPLE

Supporting the local people is of great importance in terms of the sustainable development of a society and the protection of its cultural riches. Supporting local initiatives provides both economic and social benefits. The empowerment of local enterprises not only creates employment, but also encourages regional development. In addition, supporting local producers contributes to keeping the local culture alive and strengthens social solidarity. The ability of local people to produce using their own resources reduces foreign dependence and makes the local economy more durable. Supporting the local population is a critical step to strengthen not only economic but also social ties.

# SOCIAL RESPONSIBILITY

---

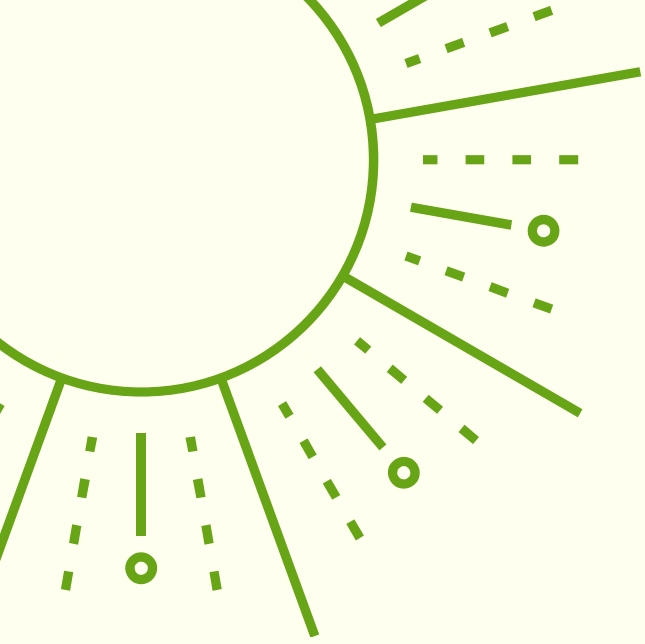

08

## Tema Foundation sapling donation

Amber Hotel is aware of its social responsibilities. In order to fulfill its social responsibilities, it regularly donates saplings to the TEMA foundation.

## Support for our lovely pets

As Amber Hotel, we regularly donate to the Animal Rights Federation (HAYTAP) in order to help improve the situation experienced by our friends who cannot speak outside under difficult conditions in our social responsibilities.

# ACCESS FOR EVERYONE

Our hotel is committed to providing accessible services for everyone within its facilities and clearly and accurately informs its customers and stakeholders about the level of accessibility on any platform where it is open.

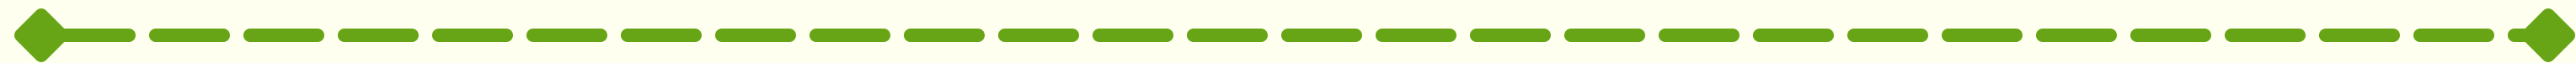

Since the capacity of our hotel has a room and bed capacity below the capacity specified in the legal regulations and the physical conditions of our business, it is not suitable for the accommodation of our disabled citizens. However, for our disabled citizens who come to stay, the visually impaired alphabet is used in our elevators.

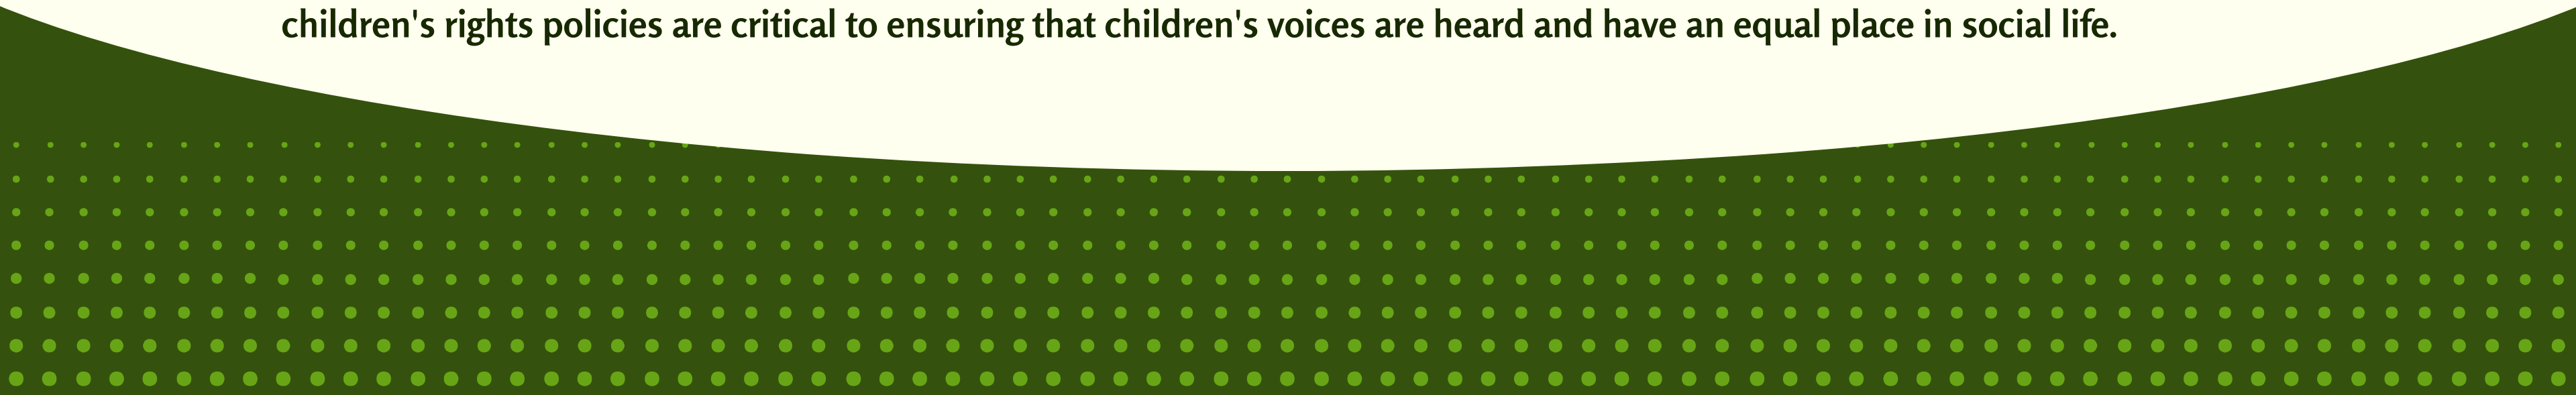

# CHILDREN'S RIGHTS POLICY

Children's rights policy is an approach that determines the rights and protections necessary for children to grow up safely, healthily and equally. This policy aims to ensure the basic rights of children such as education, health, shelter, play and protection. At the same time, it aims to prevent all kinds of violence, abuse and neglect that prevents the physical, mental, emotional and social development of children. Child rights policy ensures that states, societies and families support children in the best interests of them. A child is an individual who has not only the future of adults, but also his own rights. Therefore, children's rights policies are critical to ensuring that children's voices are heard and have an equal place in social life.
